PROFESSIONAL SUMMARY

Software Engineer with 3+ years of experience designing, developing, and deploying scalable, production-grade enterprise applications. Strong expertise in Java 17, Spring Boot, Spring Security, Spring Data JPA, and microservices architecture, with additional backend experience in Node.js and Express.js. Hands-on with event-driven architecture and asynchronous messaging using Apache Kafka (KRaft mode) and RabbitMQ. Skilled in SQL and NoSQL data modeling across PostgreSQL, MySQL, MongoDB, and Redis, and in cloud-native delivery on AWS using Docker, Kubernetes, and CI/CD pipelines. Proven track record of writing clean, testable code, leading code reviews, and delivering in Agile teams across the full SDLC.

TECHNICAL SKILLS

Programming Languages: Java 17, JavaScript, SQL, TypeScript (working knowledge)

Backend Frameworks: Spring Boot, Spring Security, Spring Data JPA, Spring MVC, Hibernate, REST APIs, Node.js, Express.js

Architecture: Microservices, Event-Driven Architecture, Distributed Systems, API Gateway, Service Discovery, SOLID Principles, Design Patterns

Messaging & Streaming: Apache Kafka (KRaft mode), RabbitMQ, Message Brokers, Event Streaming, Dead-Letter Queues, Idempotent Consumers

Databases: PostgreSQL, MySQL, MongoDB, Redis, AWS RDS, Schema Design, Indexing, Query Optimization

Cloud & DevOps: AWS (EC2, S3, RDS), Docker, Kubernetes, Horizontal Pod Autoscaling, GitHub Actions, CI/CD, Git, Maven

Security: Spring Security, JWT Authentication, OAuth 2.0, Role-Based Access Control

Testing: JUnit, Mockito, Unit Testing, Integration Testing, Test-Driven Development

Frontend: React.js, Redux, Redux Toolkit, Vue.js, HTML5, CSS3

Methodologies: Agile, Scrum, Code Review, Full SDLC, Clean Code

PROFESSIONAL EXPERIENCE

Software Engineer Specialist

Dassault Systemes | Pune, India | July 2023 - Present

- Designed and developed enterprise-scale microservices in Java 17 and Spring Boot for a large engineering platform, exposing secure REST APIs hardened with Spring Security and JWT-based authentication and role-based access control.
- Architected event-driven services using Apache Kafka in KRaft mode, enabling asynchronous, loosely coupled communication across product modules.
- Built an event-streaming and notification platform that propagates product-lifecycle changes across services through Kafka topics, implementing guaranteed ordering, event replay, retry policies, dead-letter queues, and idempotent consumers for exactly-once processing semantics.
- Developed lightweight Kafka consumer services in Node.js and Express.js that fed product-lifecycle events into notification and dashboard modules, so users saw up-to-date status without repeatedly polling the core Java microservices and without added load on them.
- Deployed cloud-native services on AWS (EC2, S3, RDS) using Docker containerization and Kubernetes orchestration with horizontal autoscaling, improving release reliability, scalability, and deployment consistency across environments.
- Modeled and optimized SQL data layers on PostgreSQL and MySQL over AWS RDS through normalized schema design, indexing strategies, and query tuning, improving data-access performance under production load.
- Integrated NoSQL data stores using MongoDB for document-oriented data and Redis for distributed caching, applying polyglot persistence to serve high-throughput, low-latency read and write workloads.
- Developed unit and integration test suites with JUnit and Mockito, and automated build, test, and deployment workflows through CI/CD pipelines in GitHub Actions.

- Collaborated across the full SDLC in an Agile team, leading code reviews and enforcing SOLID principles, design patterns, and clean-code standards to improve maintainability and reduce production defects.
- Partnered with product owners, QA engineers, and DevOps teams during sprint planning, backlog refinement, and release cycles to deliver features on schedule.

EDUCATION

Bachelor of Technology (B.Tech), Information Technology

MIT ADT University, Pune, India | Graduated 2023 | CGPA: 7.88/10

ACHIEVEMENTS

- Best MIT Team Award, CodeBreak 3.0 - national-level hackathon, recognized for problem-solving and team collaboration.
- 2nd Prize, Ideathon - university-level competition, for a creative and technically feasible product solution.
